

# ECOSPACE

## Integrated Project on eProfessional Collaboration Space

eProfessionals require more than a multitude of communication channels and applications!

User-Centric Interoperability  
Activity-Task Integration

System-Centric Interoperability  
Application-Service Integration

Media Lab

Living Labs

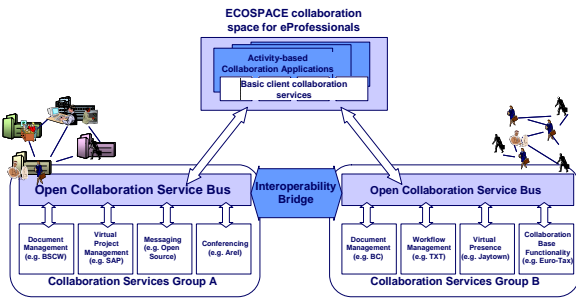

Complex Project Management

Professional Communities

Achieving a collaboration environment through an integration and interoperability middleware and new collaboration support applications

ECOSPACE takes a new innovation approach driven by technology co-creation between users and developers

Traditional Innovation Approach

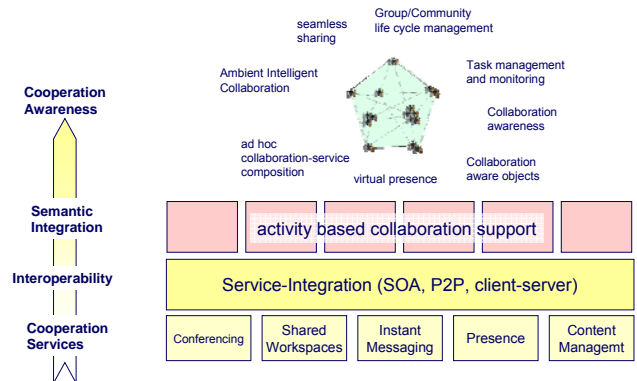

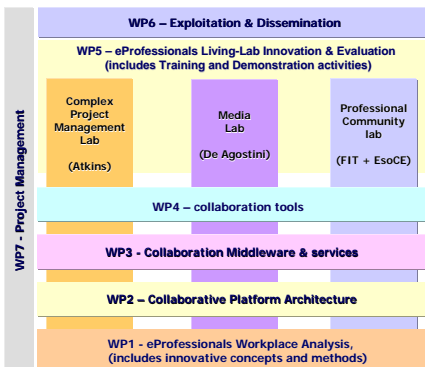

- Technical functionality perspective
- User involvement limited to set examples and their validation
- Waterfall development of major releases

ECOSPACE Innovation Approach

- Systemic perspective of eProfessional ways of working, business context and technology
- User involvement from day 1 through co-creation in Living Labs (EAR)
- Fast idea push-pull experimentation cycles based on real-life settings and evolving technology

Interoperability and semantic integration will lead to an activity based collaboration support
